1. Field of the Invention The invention relates to the field of communications, and in particular, to the adaptive re-use of communications between network entities to improve wireless user experience.
2. Description of the Prior Art Wireless communications networks, such as the 3G and/or LTE radio access networks are a critical part of many, if not all, modern communications systems. The user experience, or user experience with a network, typically requires a wireless device to connect to the wireless communications network and to stay connected as the user moves throughout a service area. The service area may be in a building, such as a 2d92ce491b
