Oct 5, 2012 I have a D-Link router DIR-600 and I want to set up it as a repeater. I set the router up with the Internet connection mode set to DHCP, set the IP of the router to 192.168.1.1 and the IP of the WAN interface to 192.168.1.100 and then make all IP addresses of the subinterfaces ranging from 192.168.1.0 to 192.168.1.160. I enabled the firewall and started the router using the web interface. I successfully connected to an internet site and I am able to ping the router but no other IP address. What is the problem? Oct 7, 2012 I have a DD-WRT firmware installed on my router but for some reason cannot get the internet working in the subnet specified. I'm getting the following when I connect to the router with the browser: dhcp_discover() attempt 1 DHCPDISCOVER on eth0 to 255.255.255.255 port 67 interval 6 DHCPPOFFERSV4 - No DHCPPOFFERS received DHCPPOFFERSV4 - No DHCPPOFFERS received DHCPPOFFERSV4 - No DHCPPOFFERS received dhcp_discover() attempt 2 DHCPPOFFERSV4 - No DHCPPOFFERS received DHCPPOFFERSV4 - No DHCPPOFFERS received DHCPPOFFERSV4 - No DHCPPOFFERS received DHCPPOFFERSV4 - No DHCPPOFFERS received dhcp_44474df7b8
