4 018a6b7b35 . De profundis, vol. A: This is a simple regex, if I understand correctly. The solution I came up with is this: `import re def get_imgs(html): img = re.findall(r'+src="([^\"]+)">', html) return [b"{}".format(img[0]) for img in img]` If you wish to get rid of the space and extract the first bit of data: `def get_imgs(html): img = re.findall(r'+src="([^\"]+)">', html) return [b"{}".format(img[0].replace(' ', '')) for img in img]` However, a lot of this is a matter of preference and aesthetic taste. The more elegant solution may be to use lxml library. The manner in which rural Americans access and receive health care services and information in their local communities is understudied, and is an important public health issue. The main goal of the proposed project is to improve health care services and information delivery for the rural elderly in a rural community. The specific aims are: (1) to adapt and implement a successful rural elderly health services and information dissemination intervention in a rural area with a high proportion of elderly residents; (2) to develop and refine a strategic planning toolkit to be used to facilitate participation in dissemination planning; and (3) to assess the impact of the dissemination intervention on community and individual change. This project will be conducted in a rural area in north-central Iowa. The project will include three studies: the evaluation of the dissemination intervention (study 1); the development and refinement of a planning toolkit (study 2); and the assessment of the intervention (study 3). The evaluation will be conducted with two measures. First, a survey of all (n=1,000) elderly persons in the catchment area will be conducted to assess the impact of the dissemination intervention. Second, the dissemination intervention will be implemented in the catchment area. All organizations and individuals in the intervention area will be surveyed at baseline and three months after the dissemination intervention begins to determine the reach of the dissemination intervention, the factors that facilitated or impeded the dissemination intervention, and the influence of the dissemination
