5.25 Media Dashboard USB 3.0 Driver Full Version Review Star Trek Online. No items have been added yet! Related Collections. Image with no alt text.Q: Can't Access to 'this' in a own class component I had a big problem with my component. I have two classes that should not share a component. For example. the parent class should have his own view, inputs and buttons. while the component should have its own function, and the need to be re-instantiated. In my case i have two classes named Switch and SwitchPanel that should re-instantiate the component. The Switch class should have a function setValue that change the switch, a method updateInputs that will update the inputs inside the component and a function render that will renders the component inside the SwitchPanel class class Switch setValue: (value) -> @state = value @render() render: -> div class="row" div class="switch-off" div class="label off-label" for="onoffswitch-#{@state}" input id="onoffswitch-#{@state}" type="checkbox" class="onoffswitch-checkbox" checked div class="label on-label" for="onoffswitch-#{@state}" input id="onoffswitch-#{@state}" type="checkbox" class="onoffswitch-checkbox" div class="switch-container" div class="handle" class SwitchPanel setValue: (value) -> @state = value @render() render: -> div class="row" div class="switch-on" div class="label on-label" for="onoffswitch-#{@state}" input id="onoffswitch-#{@state}" type="checkbox" class="onoffswitch-checkbox" div class="label off-label" for=" 3ef4e8ef8d
