### What's New in the Reysoft Data Recovery Wizard Pro?

Reysoft Data Recovery Wizard Pro is the only recovery software that protects you from the loss of your precious files. When any kind of data loss takes place on your computer, it is highly likely that you don't have the time to fix the problem manually. Instead of doing that, all you have to do is give Reysoft Data Recovery Wizard Pro a try. Whether you need to recover the files from a hard drive or a memory card, this program will help you restore your data. As you can see, this program comes with an intuitive wizard that makes recovering your data a breeze. Everything you need to do is to follow the on-screen instructions and hit the buttons according to your needs. One of the most appealing features of this application is its database of backup files that can be used to restore lost or damaged data. The database stores backups for both external hard drives and memory cards, which means that the data will be transferred from your current hard drive to the database automatically. But that's not all, as this program also includes a memory scan that can help you recover data that have been stored in the RAM (Random Access Memory), which is one of the most common storage areas for temporary files. This might seem like a somewhat obvious feature, but let's just say that sometimes the file you were working on could have been deleted or corrupted, which meant that the data was never saved to the hard drive. However, this program can still recover it thanks to its RAM Scan feature. It is highly recommended to use the RAM Scan feature whenever you're trying to recover a damaged file, as it is the fastest recovery method available. Regardless of the reason that could have led you to lose your data, Reysoft Data Recovery Wizard Pro should be the tool you use. It comes with a database that is specially designed to help you recover all the types of data you might have lost, so you can start right away without any further delays. Make sure you don't have any files open, close all programs and open this software. Select your operating system as well as the device (Hard Drive, Memory Card or USB Drive) that contains the lost files and select the type of recovery you want to perform. A few seconds later, you should be done.
