Easy Net Switch is an easy to use tool designed to store network and Internet configuration settings into location profiles. By switching between location profiles, you can quickly and easily connect to a network without having to manually re-configure settings each time. Assume you are using DHCP-enabled network at your office, and a static IP-address assigned to your network card at home or at any other place. You also use different printer and IE proxy settings in different location. A shared folder is used when you at home to exchange the files between your laptop and your home computer, but you have to disable this shared folder when you at office to keep your laptop more security. Every time you connect to a network you have to change all of these settings manually. But it would a thousand times easier to store two profiles (called "office" and "home") in Easy Net Switch. With a click of the activate button, Easy Net Switch can do all of these configurations for you automatically! Features of Easy Net Switch: -Assists you to store network and Internet connection profiles into location profiles. -Select location profile by clicking the preset locations or create a new profile. -Select features like Ethernet, wireless, DHCP, and static IP settings. -Change settings of these features automatically. -Save, load, and switch location profiles. -Works with Windows XP, Vista, 7, 8 and 10.
