Simple USB Logger is a professional tool designed to help you log and analyze the traffic between your computer and a connected USB device. It supports protocols that includes USB traffic in both raw HEX and structured forms. This USB monitoring application uses URB's that parse out the fields of interest and present them in a structured format. It also has filtering capabilities, and can be set to log USB traffic in real time or log a filtered set of USB packets. With this tool, you can analyze a USB session in real time, or by selecting packets for viewing later. All the captured information is displayed in a user-friendly layout. You can filter out packets that you do not want to see. You can also have the application dump the packets in the OS for later viewing and analysis. The tool can work with both virtual and physical USB hubs. Filtering options, packet size, start/stop USB session and end point filters make this a perfect tool for USB troubleshooting and USB protocol analysis. LoggerUSB is an easy-to-use USB and serial logging utility for Windows. As a freeware, it can be installed on any computer without requiring user intervention. As a tool to test USB and serial devices and protocols, it is especially useful for testing DTOs and connecting to serial devices, such as printers, CNCs, microcontrollers and embedded devices. The LoggerUSB main window is simple, but it offers many features, and is extensible. All the data loggers can be configured to log to files, databases or the system, and their messages can be customized with filter options, date, time or size limits. LoggerUSB can also log USB devices and their controllers, and display and parse USB traffic and its content in its main window or save it in a file for later analysis. Highlights • Easily view and parse USB traffic • Load and parse logs from files, databases or the system • Configure data loggers using filter options, date, time or size limits • Save USB and serial traffic for later analysis • Possibility to capture USB and serial traffic (virtual hubs) • Full support for USB 1.0, USB 2.0 and serial protocols • Fully configurable loggers • Autosize loggers • Possibility to log to files, databases or the system • Full Unicode support • Fast logging without a lock • Ability to parse USB traffic using filters • Option to log data in structured or raw HEX

#### What's New In Simple USB Logger?

Simple USB Logger allows traffic capturing between a device driver and a USB device connected to your computer, enabling you to analyze the sent and received packets within a user-friendly interface. Starting a new monitoring session is easy, since all the options are one-click away within the application's toolbar. You can use the default settings that the application comes with or choose to initiate an advanced session, where you get to customize the monitoring settings. Simple USB Logger can work with both real and virtual USB hubs, saving the captured data in real-time. You can set it to optionally record bulk and ISO transfers without data buffer and save the captured data to the kernel memory. The application displays detailed information about the captured data, including the time stamp, the request type, the direction and descriptor type or the transfer status. It can go further with the analysis and show you information about each URB packet, as well as details concerning the content of the packet, in both raw HEX mode and structured form. Identifies errors and uses endpoint filters If for any reason a blue screen appears while working with the connected USB device, this application can extract data from the generated dump file, enabling you to view the last processed requests and possibly identify the cause of the problem. Its search and navigation capabilities help you easily jump to the next or the previous submitted, completed packet or go to identified error messages. It also supports endpoint filters. Reliable USB monitoring and parsing tool Simple USB Logger acts as an USB monitoring tool with URB and descriptor parsing capabilities. It can help you log and analyze the traffic between your computer and a USB device, identifying errors and displaying data packets.
