Category:November 2006 events in the United States Bone marrow transplantation (BMT) is an integral component of the treatment of patients with high risk leukemia. It has been shown in preliminary studies that prolonged immunosuppression followed by stem cell reinfusion leads to a graft-versus-leukemia response in which donor T cells eliminate leukemic cells from the marrow. The timing of the transfer is crucial since marrow repopulation begins in the first few weeks following transplantation. Our objectives in these studies are: (
